

# **ClearWaters Clearly Stable**

Ponds can become saturated with millions of tiny particles or dust molecules which are so small and light that they are in constant suspension and floating around within the water, which collectively can make the water appear hazy or so polluted that visibility is effected, leaving the pond murky looking and the fish impossible to enjoy. ClearWaters Clearly Stable contains two natural ingredients which when used during the spring and summer months will keep the pond water beautifully clear.

The first part of ClearWaters Clearly Stable consumes the organic and harmful waste substances whilst the second ingredient adds much needed natural and essential trace elements for the livelihood of the fish, molluscs such as water snails and water plants. Together, these two components in Clearwaters Clearly Stable work very effectively ensuring best possible pond conditions and fight against the reproduction of single celled algae responsible for green water.

Dispensing:

Add one 25ml scoop (supplied) to a watering can or bucket of pond water per 1,000 litres of pond water on days 1, 2, 3, 4 & 5 ensuring even distribution over the whole area of the pond surface. Then, add one 25ml per 1,000 litres of pond water each week whilst the fish are feeding and water plants are growing. With ponds suffering from an accumulation of single celled algae (green water) we suggest a treatment with ClearWaters Green Water before adding Clearly Stable.

ClearWaters Clearly Stable is available from all participating Nishikoi stockists in the following pack sizes:

ClearWaters Clearly Stable 1000ml - Treats 10,000 litres / 2,200 gallons

ClearWaters Clearly Stable 2500ml - Treats 25,000 litres / 5,500 gallons

ClearWaters Clearly Stable 5000ml - Treats 50,000 litres / 11,000 gallons
