

Nishikoi - Wheatgerm

A highly digestible, vegetable-based, low protein diet ideal for feeding at low temperatures in spring and autumn. The high wheatgerm content improves digestion at cooler temperatures and when the fishes metabolism is lower keeping ammonia excretion to a minimum. This is vital at periods of reduced filter performance during low temperatures. 19.7% protein for growth, high wheatgerm content Antioxidant action of Vitamin C & E to help the immune system. Vitamin D for strong bone formation and Spirulina (enriched with essential fatty acids) that aids natural colour. Floating for fish feeding at the surface. Highly digestible quality fishmeal a Complete & Balanced Formulation.
